Figure 1.5: Epidemic Curve of Linked and Unlinked Cases among Work Permit Holders not Residing in Dorms by Press Release Date (left panel) and by Symptom Onset or Notification Date⁵ (right panel)

⁴ Date of notification was used for cases that did not display any symptoms. The numbers with onset in the past few days may see an increase as more cases are notified.

⁵ Date of notification was used for cases that did not display any symptoms. The numbers with onset in the past few days may see an increase as more cases are notified.

Figure 1.6: Average Number of Days from Onset of Symptoms to Isolation (QO, MOH contact, notification or admission) for Community Unlinked Cases in Each Day⁶

Line represents the 14-day moving average, Bar represents the daily average.

⁶ Area in grey demarcates the data points for the past 3 days where some cases are still pending investigation. The bar chart shows the daily average number of days from onset date to isolation, and it excludes cases with missing onset dates. The line chart shows the moving average for the past 14 days, and it takes into account cases with missing onset date. For these cases, onset date was substituted using notification date. Based on this methodology, recent data points on the line chart will tend to underestimate the average number of days to isolation for the past 14 days.
