<sup>&</sup>lt;sup>1</sup> Previously we had tracked the work permit holders living outside dormitories as a separate category, and put a large number of these workers on Stay Home Notices (SHN). The SHN for these workers has since expired. Hence we have now updated the definition of "Cases in the Community" to include all cases (including amongst work permit holders) that are detected outside of the dormitories.

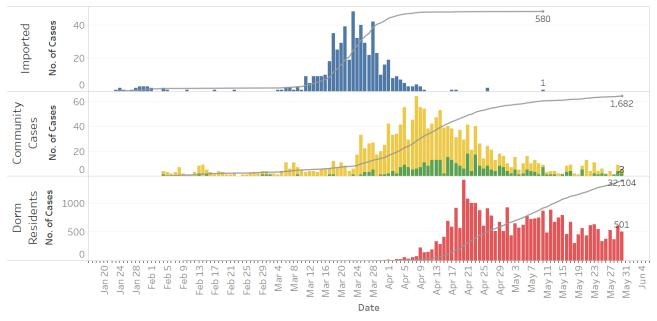

<sup>&</sup>lt;sup>2</sup> Includes cases pending epi-investigation.

<sup>&</sup>lt;sup>3</sup> Population at risk for community cases includes SC/PRs and work pass holders not residing in dormitories. Source: MOM and Singstat.

**Figure 1.5**: Average Number of Days from Onset of Symptoms to Isolation (QO, MOH contact, notification or admission) for Community Unlinked Cases in Each Day<sup>5</sup>

<sup>&</sup>lt;sup>4</sup> Date of notification was used for cases that did not display any symptoms. The numbers with onset in the past few days may see an increase as more cases are notified.

Line represents the 14-day moving average; Bar represents the daily average<sup>6</sup>

<sup>&</sup>lt;sup>5</sup> Area in grey demarcates the data points for the past 3 days where some cases are still pending investigation. The bar chart shows the daily average number of days from onset date to isolation, while the line chart shows the moving average for the past 14 days. Both charts exclude cases with missing onset dates in the computation of the average.

<sup>&</sup>lt;sup>6</sup> The daily average of 13.0 on 22 May is attributed to a single case who had onset of symptoms on 8 May and was isolated on 21 May.
